

# PlanMe Storyboard

By: Michael Yang

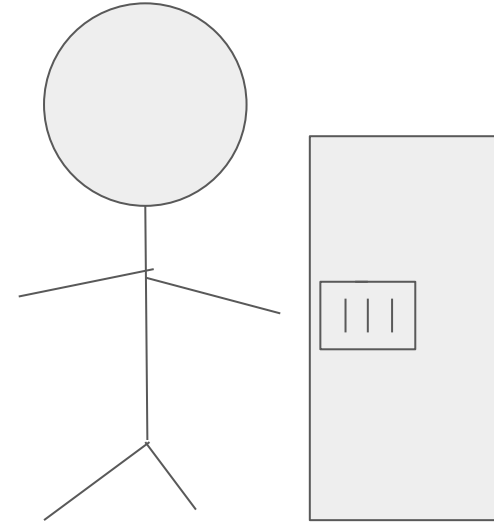

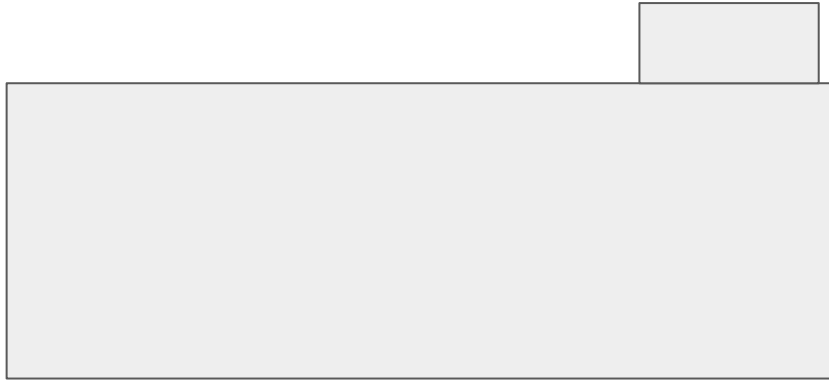

Ms. Soni

$$1 + 1 = 2$$

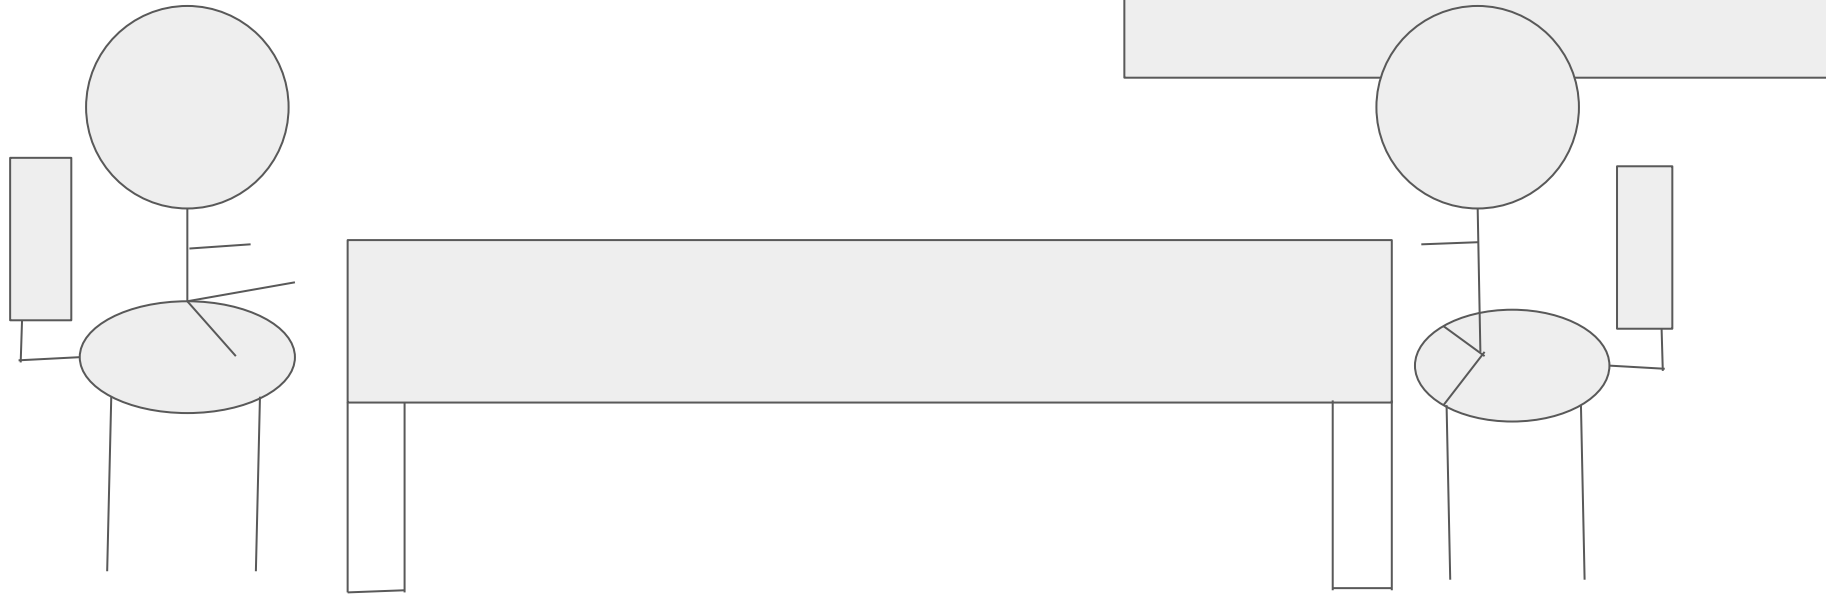

Math Class

Ms. Soni is a math teacher teaching at a high school. She is the newest math director and in charge of checking other math teachers to see what level of math they should teach students. She has a busy day of teaching, planning, picking up her kids, cook, clean, and many more.

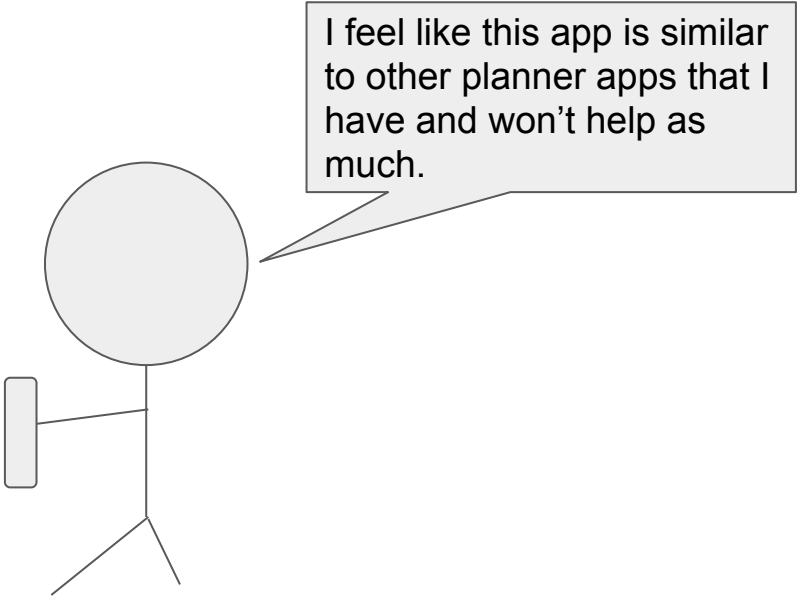

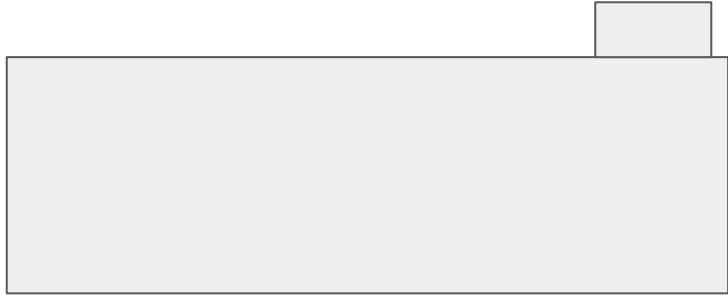

She spends most of her nights writing out plans for her class and it stresses her out as when she makes plans to do things it never works out.

One day during a teacher conference  
one of the other teachers had  
recommended her to use an app called  
PlanMe.

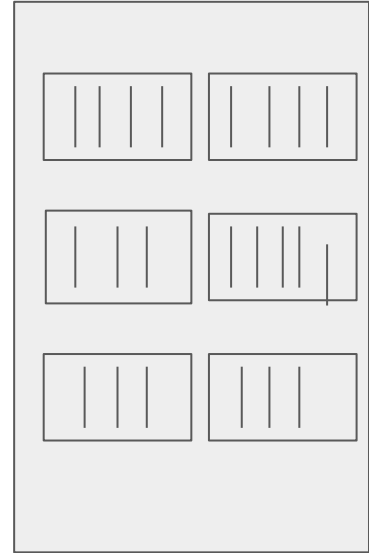

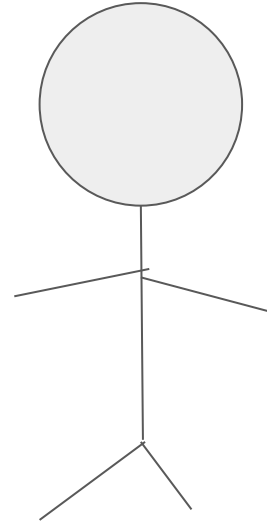

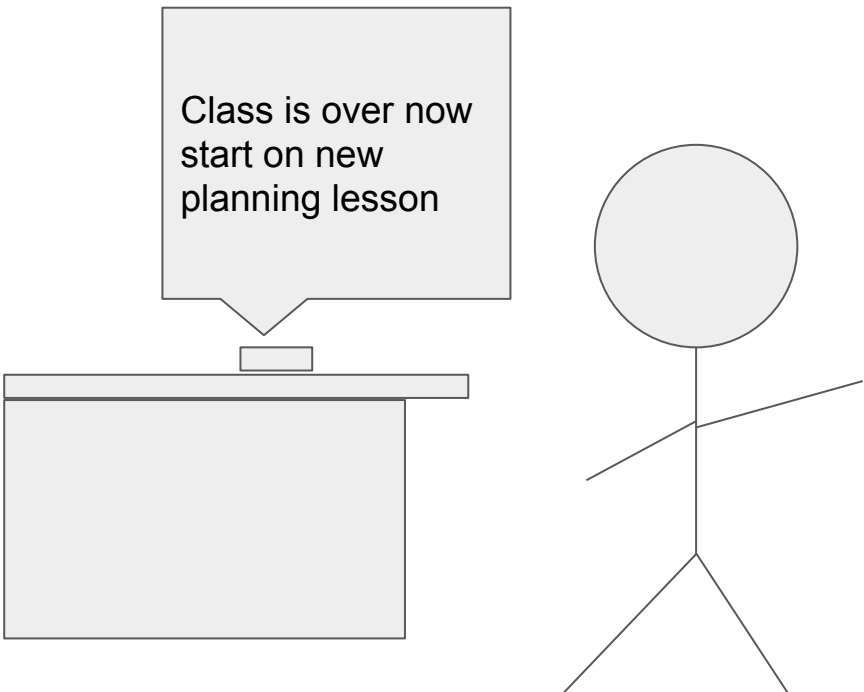

When Ms. Soni heard of the PlanMe app she had thought of a regular planner app that would be like the rest. So she decided not to use it or download it for the time being.

After a long day of working, grading, and planning Ms. Soni finally decided to use the PlanMe app.

Class is over now  
start on new  
planning lesson

Ms. Soni

$$1 + 1 = 2$$

Math Class

Just after a few days she got use to the app and loved it more and more getting better at planning.

After using the PlanMe app Ms. Soni has been able to spend more time with her kids and not being off track or forgetting anything that she needs.
